

AUTOMATIC BARRIERS

CATALOG SHEET

60W transmission turbine with a decelerating induction motor, energy saving, fan prevents overheating, can work 24 hours non-stop: Drive Steady, Noise Lower, Structures Compact, can self-lock;

Precise chain mechanism: the chain mechanism can regulate the boom arm shaking and overload of the motor, thus making the ramp more stable and extending its working life;

Pressure sensor - anti-crash function: if the ramp arm hits an object/person during descent, it will automatically raise.

Loop detector - anti-crash function: if the car is standing under the ramp, the barrier/ramp will not lower. When the car passes, the ramp arm lowers.

Priority opening - function: regardless of the position the ramp detects, it will open/raise on command;
